

Pilot and data overview

A mobile-first platform for aviation ground operations. One page for operations and security teams.

WHAT THRUFLY IS

ThruFly is designed to put the turnaround on the crew's own device and give leaders a timestamped view as it happens: step-by-step turn procedures, crew and equipment, a live station view and a record of who did what, and when. It is designed to work offline.

THE PILOT

- One station, one or two turnaround procedures
- 60 to 90 days
- Metrics agreed before we start
- No integration project required to start
- Scope, data ownership and exit terms agreed in writing first

WHAT YOU PROVIDE

- A station and a sponsor
- One or two turnaround procedures
- A small group of crew with phones or tablets
- A point of contact

WHERE WE ARE

ThruFly is pre-pilot. It has not been integrated with other systems. We are looking for founding station partners, and we will not name any organization without its permission.

METRICS WE WOULD PROPOSE

- Checklist completion across turns
- Time to log an issue
- Equipment located when needed
- Completeness of the record for review
- Crew adoption

Proposed measures, not results.

YOUR DATA

- Your operational data remains yours
- Ownership, access, retention and exit terms agreed in writing before a pilot begins
- Used to run the pilot and report back to you, and for nothing else without written permission
- We do not sell customer data
- NDA available before any detailed walkthrough
- Scoped without passenger personal data

SECURITY STATUS

We do not yet hold third-party security certifications such as SOC 2 or ISO 27001. We answer security questionnaires in writing, and where the honest answer is "not yet" we say so.
